”SMART SOLUTION FOR A SMARTER FUTURE”

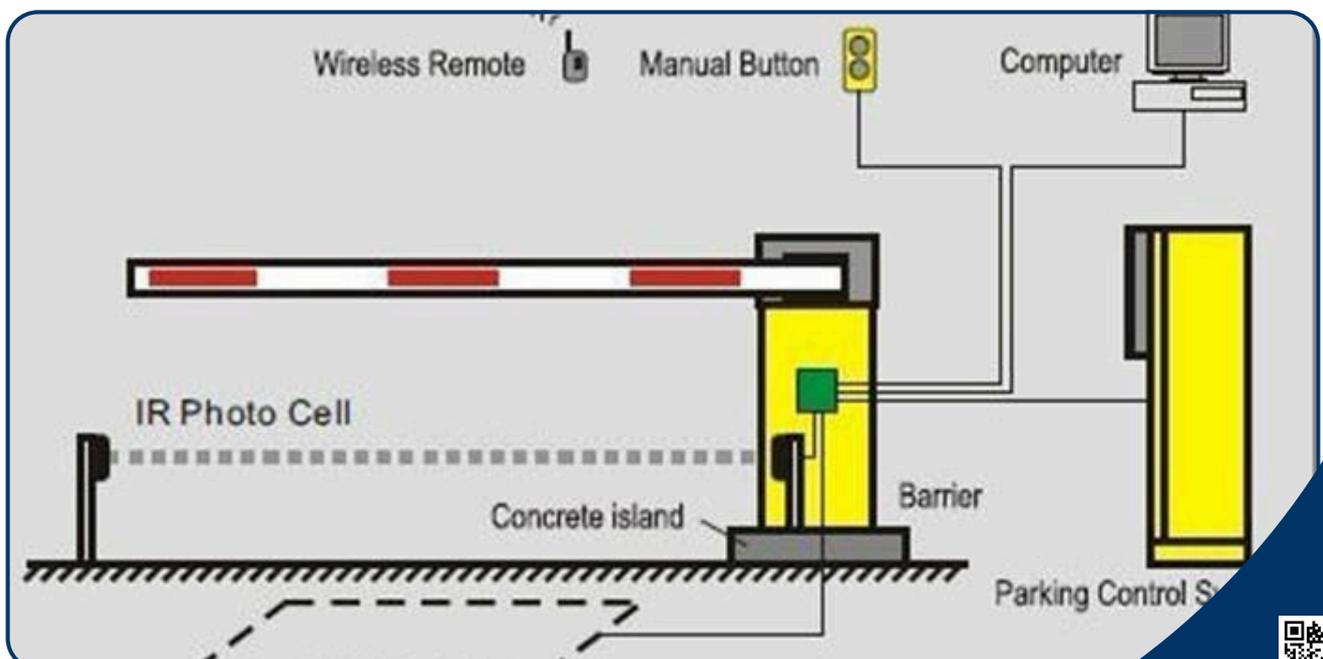

Established in 2016, RISING AUTOMATION has been a leading provider of advanced automation solutions, delivering excellence in automatic doors, sliding gates, boom barriers, dock levelers, dock shelters, access control systems, and industrial security solutions. With years of expertise and a commitment to innovation, we have successfully catered to residential, commercial, and industrial sectors, providing high-quality, durable, and technologically advanced products. Our automation systems are designed to enhance security, efficiency, and convenience, integrating smart technology and precision engineering for seamless operation. Whether it's automated entry systems, traffic management solutions, or warehouse loading dock equipment, we ensure that our products meet the highest standards of quality, safety, and reliability. At RISING AUTOMATION, we prioritize customer satisfaction, offering customized solutions, expert consultation, professional installation, and dedicated after-sales service. As a trusted name in the automation industry, we continue to push the boundaries of technology, making spaces smarter and operations smoother.

BOOM BARRIER

A boom barrier is a security gate system designed to regulate vehicle access at entry and exit points. It consists of a horizontal bar (boom) that raises and lowers to control traffic flow. Boom barriers are commonly used in parking lots, toll booths, industrial areas, and residential complexes to enhance security and ensure smooth vehicle movement.

- Controls and restricts unauthorised vehicle access.
- Ensures smooth entry and exit flow.
- Can integrate with RFID, remote control, and ticketing systems.
- Made from strong materials for long-lasting performance.
- Equipped with sensors to prevent accidental collisions.
- Functions effectively in various environmental conditions.

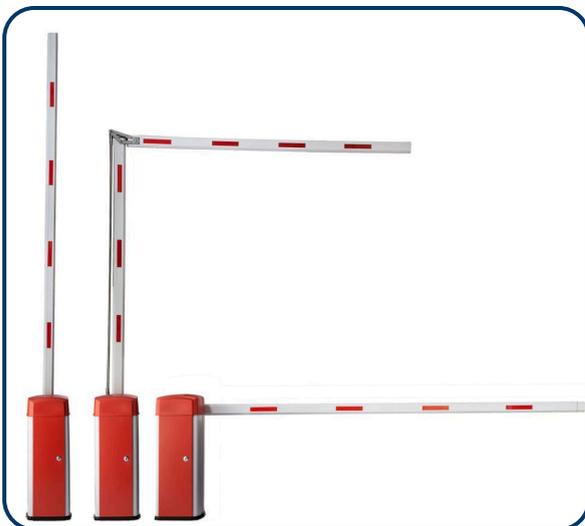

TYPES OF BOOM BARRIER

Fencing Boom Barrier : A Fencing Boom Barrier is a special type of boom barrier that comes with an attached fence or grill. It provides extra security by preventing people or small vehicles (like bikes) from passing underneath the boom arm.

Telescopic Boom Barrier : A Telescopic Boom Barrier is a type of boom barrier with an extendable arm, allowing it to cover wider entrances compared to regular boom barriers. The arm consists of multiple sliding sections that extend or retract as needed.

Straight Arm Boom Barrier : A Straight Arm Boom Barrier is the most common type of boom barrier used for controlling vehicle access. It has a single, straight arm that moves up and down to allow or block entry.

90-Degree Boom Barrier : A 90-Degree Boom Barrier is a type of barrier where the arm lifts vertically (straight up) to a full 90-degree angle when opened. This design is ideal for areas with limited space where a standard boom barrier might not be practical.
